Professional Summary

I build reliable software across backend systems, full-stack products, deployment pipelines, and cloud environments. My work includes application development, engineering automation, infrastructure support, performance improvement, and practical delivery across business and product-focused teams.

Backend Engineering · Full-Stack Development · DevOps & CI/CD · Cloud Infrastructure · Automation · Game Development

Experience

Lead Developer
Okakichi Sdn. Bhd. — Oct 2025 – Present

- Lead engineering delivery across backend and frontend workstreams, with ownership of technical direction, code quality, repository structure, and build automation.
- Support maintainable product delivery by improving engineering workflows, collaboration, and overall implementation quality.
- Work across product and technical needs with a focus on reliability, performance, and scalable development practices.

Full-Stack Developer
Okakichi Sdn. Bhd. — Apr 2025 – Oct 2025

- Built and supported frontend and backend features for gameplay-focused product work.
- Handled profiling, performance improvements, bug fixes, tooling, automation, and integrations.
- Contributed to engineering quality and product delivery, leading to promotion into a lead role.

Full-Stack Developer
Ricrym — Dec 2024 – Feb 2025

- Improved security and user experience with SSO and remember-me workflows.
- Worked on encryption and decryption flows, frontend redesign, backend refactoring, deployment, and Discourse community setup.

Software Engineer
Verisense Health — Jul 2023 – Jul 2024

- Maintained AWS infrastructure and Jenkins deployment pipelines for Verisense Cloud.
- Built and supported full-stack product features with emphasis on reliable deployment and engineering support.

Freelance Software Developer
Self-Employed — Feb 2021 – Apr 2025
